

DRIVER TRAINING & EVALUATION SYSTEM

PROBLEM

Driver evaluations across a fleet are inconsistent — different evaluators, different standards, notes scattered across paper and memory. When something goes wrong, there's no defensible record of what was assessed.

APPROACH

Built a structured evaluation system: standardized rubrics for each skill area, a consistent scoring flow, and a written record generated for every driver assessed. Built on the methodology behind 600+ documented driver evaluations in an autonomous vehicle training program.

OUTCOME

Every evaluation follows one standard and produces a written record. Write-up time drops, and driver performance becomes comparable across an entire fleet.

WHY THIS MATTERS TO YOU:

When an auditor or your insurer asks how you assess your drivers, you have a documented, consistent answer — not a shrug.
